As a professional driver, the news and weather broadcasts are imperative to my safety and that of the traveling public on the road. This is best found through the satellite service I subscribe to "XM Satellite Radio". I speak from experience of using XM for the last 2 years as opposed to trying to find this information through local channels across the nation that I was forced to use before I was referred to XM Radio by another driver. I rely on this continuously updated, non commercial, no interruption service with regards to my daily work situation. I respectfully urge the FCC to reject the National Broadcast Association's petition 04-160 and support XM's ability to provide the kind of programming I demand.

It's my opinion that the NAB should not be allowed to dictate to me what I am allowed to hear.
